

SPECIALIST SERVICES

Cyberwise – Total digital protection

Because digital technology touches every part of your business or organisation, you need a holistic digital security solution. That is, a solution designed for all your operations, not just a specific team or function.

Cyberwise is a consultancy based solution covering a wide range of digital security issues.

Our approach is a flexible, tailored solution using a suite of products and based on best practices that we deliver by learning how your organisation works and your aspirations for its future.

With this knowledge, we work with you to develop a digital security system that can adapt as your needs change.

How it works in detail...

PERIMETER SECURITY

There's much more to erecting a resilient digital fence around your business and its data than installing antivirus software on the office computers. Our perimeter security assessment covers all devices on your IT network, identifying and addressing potential security weaknesses.

ENDPOINT SECURITY

Every device that connects into your digital network from outside, be it a smartphone, a laptop or a web-enabled gadget, opens a potential weak spot in your IT security perimeter. We review your endpoint security protocols, and advise on security standards and how to ensure compliance.

DATA BACKUP

Just because it's easy to back up data doesn't mean it's just as easy to access that data when you need to. We take a multi-layered approach to backup, prioritising business critical data and systems to ensure that if you need to restore data for any reason, there's a minimal impact on keeping your operation running.

DISASTER RECOVERY

Data backup is just one component of a much broader disaster recovery strategy that addresses all aspects of your IT solution, including key team members. Our methodology looks at all potential risks, from fire through to ransomware attack, from which we develop a robust recovery plan, to protect your organisation from the unexpected.

MOBILE DEVICE MANAGEMENT

Smartphones and tablets allow your organisation to take mobile working to a new level, but they can also bring new IT management headaches. Whether a lost phone, or a web-enabled tablet used to entertain an employee's child - both are security risks. Our mobile device management solution keeps you firmly in control of all your devices, regardless of whose hands they may be in.

INTERNET USAGE MONITORING

It's becoming increasingly important to manage both the quality and quantity of digital data flowing in and out of your organisation. Through internet usage monitoring, we give you the tools to see what every device is doing at all times, allowing you to manage both data capacity and potential risks.

LEARN MORE ABOUT HOW WE CAN HELP YOU BECOME MORE CYBERWISE

To arrange a **Cyberwise** review or to find out how our cyber protection suite of products and how they could help protect your business or organisation, call us on 0808 168 9135 or email enquiries@itsupport365.co.uk. We would be pleased to have a no-obligation conversation with you.

Alternatively, follow us as we share news updates and information on Twitter, Facebook or LinkedIn.

Because digital systems now touch every part of your organisation, you can't afford to consider the security aspects of each element of your digital solution in isolation. Cyberwise offers you a comprehensive, strategic approach that can be tailored to your specific situation.
